PROTECTION MASK for CORONA RISK MINIMIZATION

FULL FACE PROTECTION

MOUTH-NOSE PROTECTION

USE

According to the current state of knowledge, wearing mouth, nose and / or facemasks can help to minimize the spread of the SARS-CoV-2 coronavirus. Stükerjürgen now offers **full-face protection** and **mouth-nose protection** from its own production. Both protective masks are made of high quality plastic materials. An elastic headband allows individual adjustment to the respective head circumference. The soft PVC material in the direct area of the nose lies on the skin and thus enables an optimal and comfortable fit. The filter material can easily be changed and reordered.

The full-face protection offers its wearer additional eye protection, which is used especially in industrial applications, in the service area and especially in the production sector.

Both variants effectively block the entry and exit of water drops, dust and saliva.

ADVANTAGES

- reusable
- high-quality
- light
- individually adjustable
- easy to clean

PRODUCT PACKAGING

- each packed separately
- completely assembled

The measures for self-protection and external protection should also be observed
(Cough & sneeze rules, good hand hygiene and keeping away (at least 1.5 m) from other people.)
